Introduction

The Employee Attendance Monitoring and Leave Management System is a software system designed to manage employee attendance and leave records efficiently. In many organizations, manual methods are used, which can lead to errors and consume more time. This system provides an automated solution to handle these tasks easily.

Employees can mark their daily attendance and apply for leave through the system. It keeps track of login time, logout time, and leave details. The admin can monitor records and approve or reject leave requests.

Overall, the system improves accuracy, reduces paperwork, and helps in better management of employee activities.

Objective

- The main objective of the Employee Attendance Monitoring and Leave Management System is to provide an efficient way to track employee attendance. It aims to automate the process of recording attendance and managing leave requests. The system helps in reducing manual errors and saving time. It ensures accurate and secure storage of employee data. It also allows easy access to attendance and leave records. Overall, the objective is to improve productivity and simplify management processes in an organization.

Problem Statement

- Manual attendance system is time-consuming
- High chances of human errors
- Difficult to manage large employee data
- Leave tracking is confusing
- Lack of proper record maintenance
- Data may be lost or duplicated
- Report generation is slow
- Low efficiency and productivity
- No real-time data access
- Need for an automated system
-

System Requirements

Hardware Requirements

- Processor: Intel i3 or higher
- RAM: Minimum 4 GB
- Storage: At least 500 MB free space
- Input Devices: Keyboard and Mouse
- Output Device: Monitor

Software Requirements

- Operating System: Windows / Linux
- Frontend: HTML, CSS, JavaScript
- Backend: Java / Python / PHP
- Database: MySQL
- Tools: VS Code / Eclipse / NetBeans
-

System Design

- Defines the overall structure and workflow of the system
- Divided into modules like Admin, Employee, Attendance, and Leave
- Admin manages employee data and leave approvals
- Employees can mark attendance and apply for leave
- Ensures smooth operation with secure data storage

TECHNICAL TEAM

Project Presentation

Module Description

- Admin Module – Manages employees, attendance, and leave approvals
- Employee Module – Allows login, attendance marking, and leave application
- Attendance Module – Records daily attendance and working hours
- Leave Management Module – Handles leave requests and tracks leave balance
- Report Module – Generates attendance and leave reports

Project Presentation

Algorithm / Flowchart

- Start the system
- Initialize variables and database connection
- Display login page
- User enters login details
- If valid, show menu options (Attendance / Leave)
- User selects and performs action
- System processes and stores data
- Display result (attendance or leave status)
- Repeat process if needed
- Stop the system

Start
↓
Login
↓
Validate User
↓
Display Menu
↓
Mark Attendance / Apply Leave
↓
Process Data
↓
Store in Database
↓
Display Result
↓
End

Implementation

- Developed using programming concepts like loops and conditions
- Frontend: HTML, CSS, JavaScript
- Backend: Java / Python / PHP
- Database: MySQL for storing data
- Modules implemented for attendance and leave management

TECHNICAL TEAM

KG COLLEGE OF ARTS AND SCIENCE

C Programming
Project Presentation

Output Screens

- Displays employee attendance details
- Shows login and logout time
- Indicates present or absent status
- Displays leave application status
- Shows attendance history and leave balance

Project Presentation

Results & Discussion

- System successfully tracks employee attendance and leave
- Provides accurate and reliable results
- Reduces manual work and human errors
- Stores data securely in the database
- Performs operations quickly and efficiently
- Tested with different inputs for accuracy
- Works correctly for attendance and leave processing

TECHNICAL TEAM

C Programming
Project Presentation

Conclusion & Future Enhancement

- Provides efficient attendance and leave management
- Reduces manual work and errors
- Saves time and improves productivity
- Ensures accurate and secure data storage
- Easy to use for employees and admin
